

The Future of Virtual ID

PrimeID is the ideal solution for verification of new people being onboarded into businesses, applications or teams. PrimeID also serves as an authentication method for returning user to those entities and applications.

Problem

60% of Customers Abandon Online Registration Processes
Onboarding and authentication of customers/users becomes too inconvenient.

Increasing Threats
1 in 3 global organizations has experienced Cyberattacks.

Lack of Interoperability
There isn't an identification solution that works across platforms, leading to friction in onboarding new customers.

Solution

Verify Identity
Our platform enables entities to verify new users, customers or team members prior to onboarding. PrimeID uses multiple methods - from device-specific, to credential matching to verify new users.

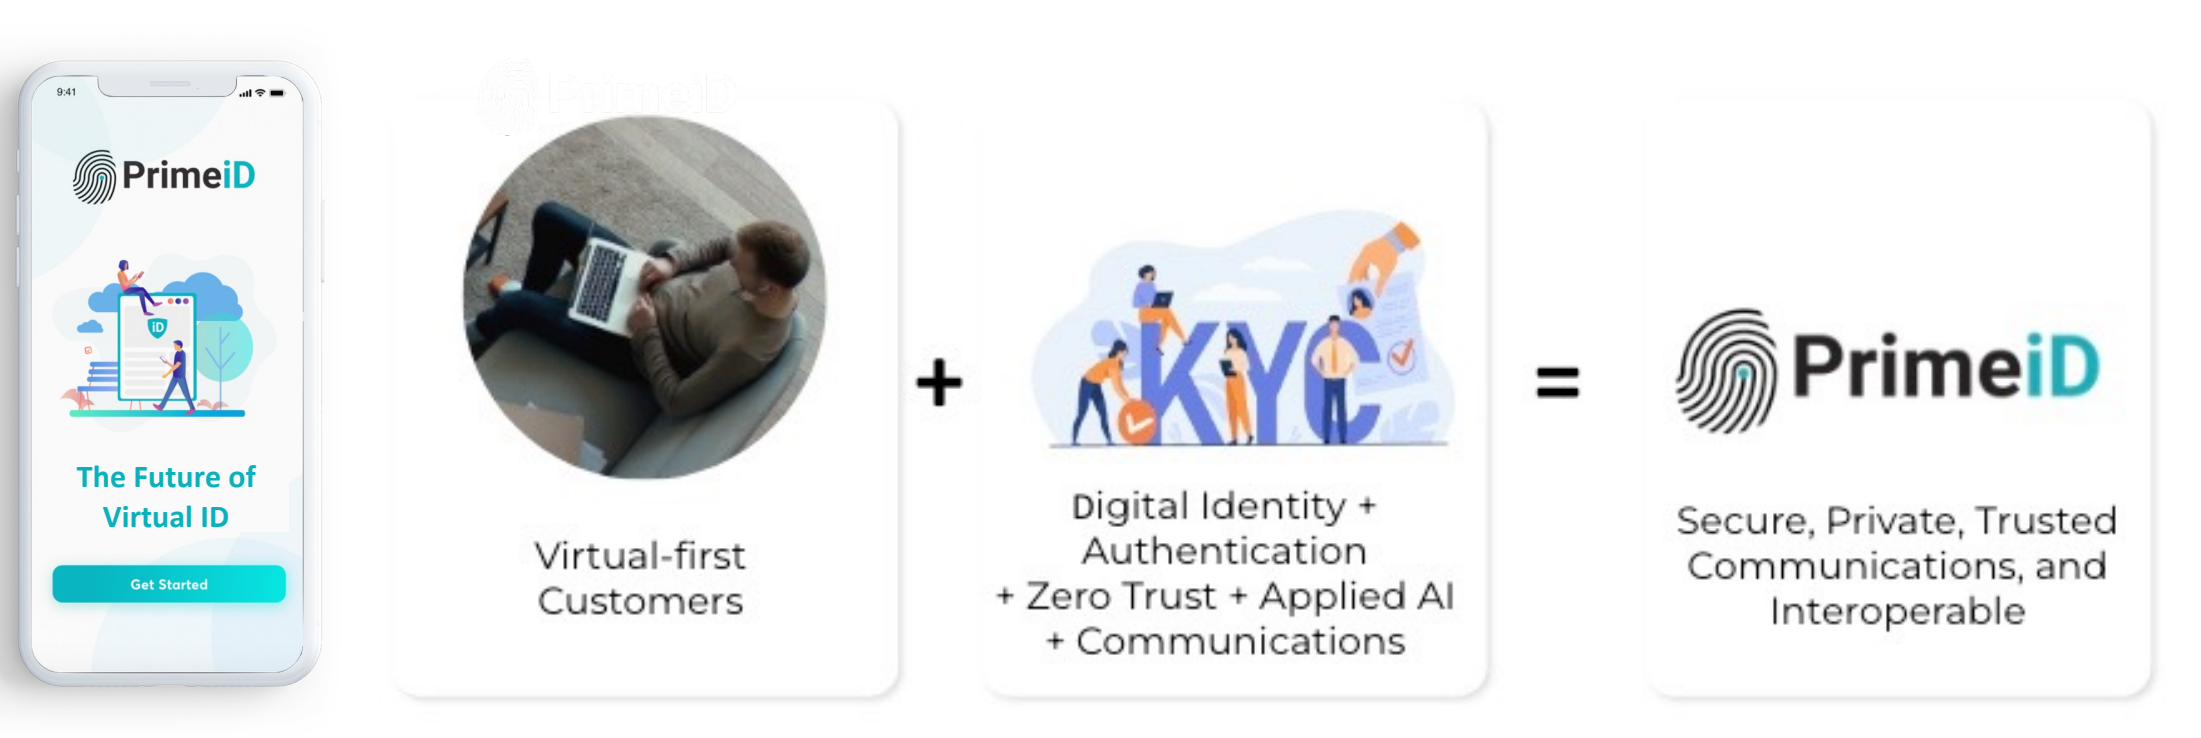

Secure Communications
The PrimeID App also provides communication between verified PrimeID users that is secure and enables safe interactions.

Multi-factor Authentication
PrimeID serves as a MFA method via device authentication as well as biometric confirmation.

Interoperability
Organizations and other platforms have the ability to reference PrimeID credentials. This will reduce friction with onboarding existing PrimeID Users.

Our Focus

Who We Are

For decades, we have worked in the Information Technology and Security, Enterprise Resource Planning (ERP) software and database sectors, as well in Business Finance and Investment. We leverage this experience with our deep knowledge of Web3 (Blockchain, Cryptocurrency, and NFT ecosystems) to create solutions for organizations and teams.
